Landice Inc. has been in business for over 35 years and specializes in making only treadmills. Landice has placed over 50,000 treadmills in health clubs and gyms. Landice treadmills are generally viewed as commercial treadmills.

Landice treadmills are not affordable for every user. Landice treadmill price starts at \$2995.

Landice makes commercial and high end home treadmills. The LTD series of Landice treadmills is built for home use or light commercial use, whereas the Club series is constructed for very heavy use in club or gym environments.

Landice treadmills include a range of features. Few Landice treadmill models offer buyers the protection of a lifetime residential treadmill warranty. This warranty keeps the retail value of the Landice treadmill models at a high price. All Landice treadmills have large walking/running areas with the motor power (3HP) to back it up. Landice treadmills are known for customer satisfaction and have been rated well by users. Landice treadmills offer some of the highest quality construction in the market.

All Landice treadmills offer aircraft locking hardware which makes the frame stronger, high inertia cast flywheel that gives a smooth feel while protecting the motor from stress, wear & tear, 400-500 pound user weight capacity which is great for heavier users, 4 ply tread belts which are twice as strong as the 2 ply tread belts which prolongs the life of the tread belt and VFX (Variable Flex) cushioning which absorbs shock in vertical, side to side or rocking motions to avoid injuries to joints and knees.

The high price is the only drawback of the Landice treadmill. For runners, serious trainers, high end home users and gyms, Landice treadmill is the best option.

The Landice L7 treadmill features a 3.0HP motor with whisper drive, a 20 x 58 inch four-ply tread belt cushioned by VFX shock absorption and 15% electric elevation. This treadmill offers 2.5 inch and 14 pound rollers to bear user weights up to 400 pounds.

The Landice L7 treadmill is good for weight-loss programs. This model offers a lifetime warranty on the frame, parts and wear items and one year on labor for residential and home use treadmills.

The Landice L8 treadmill is a full featured treadmill suitable for weight loss programs and for larger users requiring a wide training surface and durable machines. This model of treadmill offers running surface up to 22 x 63 inches, 500 pound user weight capacity, 3-1/2 diameter & 22 pound steel rollers, 15% electric grade elevation and maximum speed range between 0.5 to 12 mph.

Landice Inc. offers commercial grade treadmills in their L9 series and in the L7 and L8 club-grade models. All of these offer heavy-duty features and stronger warranties to meet the rigorous demands of the club and sports fitness markets.

Landice treadmills are high quality and reliable treadmills. However some of their features are not needed by users. Landice treadmills are mostly used for commercial purposes.
